

# IF YOU HAVE:

A PERSISTENT  
**COUGH**  
THAT WON'T GO AWAY

AND/OR

UNEXPLAINED SHORTNESS OF  
**BREATH**

GASP!

AND/OR  
UNUSUAL

**FATIGUE**

IT COULD BE  
**PULMONARY FIBROSIS**

Pulmonary fibrosis (PF) is a rare lung disease that is easily mistaken for something less serious.

If you have a persistent **cough**, **shortness of breath**, or **fatigue** – ask your doctor about being tested for PF.
